

Sluggit 30 Pellets

Effective molluscicide

Sluggit Pellets slug and snail bait is part of our original tried and tested snail bait range that has served our clients for many decades.

Sluggit Pellets, with **metaldehyde (30g/kg)** is recommended when specific **control of only slugs and snails** is needed. The single-active formulation will not be effective in the control of other pests or insects.

Sluggit Pellets is robust, durable and weather resistant for up to 14 days.

The small size of the pellets promotes even spreading and more baits per Ha providing better control.

Use Pellets For Good Protection

- High quality ingredients used in dry pelletising process
- Weather resistant (up to 14 days)
- Highly palatable
- Single-active ingredient providing control of snails, slugs
- Small Pellets size providing more baits per Ha and even distribution

Specifications

Appearance	Green pellets
Average Bait Size	2.2mm diam, 4 - 5 mm long
Baits/kg	More than 50 000
Metaldehyde Content	30g/kg
Available Pack Size	25kg 500kg 1000kg
Process	Dry Pelletising
Shelf Life	2 years

Withholding Periods

Harvest

Horticultural Crops/Vineyards

Do not apply later than 7 days before harvest.

Agricultural Crops

Do not apply later than 8 weeks before harvest.

Pastures/Pulses/Oil

Seeds/Winter Cereals

Do not graze or cut for stock food for 5 weeks after application

Continue to monitor the crop and population numbers after applications and make follow up applications if necessary.

Snail monitoring to determine application times and rates

The key to efficient crop protection is continuous monitoring. Structured snail monitoring practices before, and 7 days after application should always be followed to determine snail population and appropriate application rates for effective control. Application rates should be seen as guidelines only and should be adjusted to address your specific snail population based on monitoring results.

Baits are seen as a source of food

Snails, slugs and insects see Sluggit baits as food. When they move around looking for food and happen to cross path with a bait, they will feed on it with toxic consequences. They will, at the same time, also feed on natural food sources. The more baiting points on the ground, the higher the likelihood of them feeding on it.

Protection period

Baits that last longer in the field, results in a longer protection period. Weather conditions have a big influence.

Why number of baits/kg is relevant

More baits/kg means more baiting points. This will lead to a higher likelihood of snails and slugs coming across baits in the field. Use 4 baits per slug or snail as a dosage guide. Sluggit Pellets has more than 50 000 baits per kg.

Timing is crucial

Apply during warmer, moist conditions just after rain when slugs and snails are more likely to feed. During Autumn, Spring and early Summer snails and slugs are known to be very active.

Application Rates

Situation	Application Rates
Agricultural Crops Cereals, oil seeds (including poppies) Pulses	8kg - 20kg / Ha
Horticultural Crops Fruit, grapevines Vegetables	8kg - 20kg / Ha
Pasture Establishment	6kg - 10kg / Ha
